Treasuries moved modestly lower across the curve as inflation levels continued to fall. The 2-year continued its recent move lower, declining another 7 basis points (bps) to close the week at 3.58 percent. The 10-year was a bit more muted, dipping 6 bps to 3.65 percent.

>> The Takeaway

- Equities recovered sharply after last week's sell-off amid a softer-than-expected payrolls report.
- Bonds, particularly on the short end of the curve, remained volatile with short-term Fed policy expectations remaining mixed.

Looking Ahead

The major news this week will be September's Federal Open Market Committee (FOMC) meeting. Other important items include the release of critical data points in retail sales, industrial production, and existing home sales.

- The week kicks off Tuesday with the release of **retail sales** and **industrial production data** for August. Retail sales are expected to fall 0.2 percent after easily exceeding economist estimates in July with a 1 percent increase. Industrial production is expected to be modestly higher after a weather-related decline in July.
- All eyes will be on the Fed on Wednesday. The central bank is widely expected to start a rate-cutting cycle by lowering the federal funds rate after its September meeting. Investors and economists will monitor **Fed Chair Jerome Powell's post-meeting news conference** for hints on the path of monetary policy.
- Finally, the week wraps Thursday with **existing home sales** for August. The pace of existing home sales is expected to fall after a modest increase in July.
